

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant: Greg Pakieser)
Serial No: 10/647,573) Examiner: Michael Chambers
Filed: August 26, 2003) Group Art Unit: 3711
Title: SOCCER TRAINING DEVICE)

To: Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450

Clean Copy of Claims in the Case as Now Amended

8. A training device for soccer and a soccer goal post framework, said goal post framework having a first side leg extending upwardly, a second side leg extending upwardly spaced apart laterally from said first side leg, and an upper cross-bar extending laterally between said first and second side legs, an entrance opening between said first and second side legs of said goal post framework, said training device comprising a blocking member having a relatively large lower portion and a relatively smaller upper portion, said relatively large lower portion of said blocking member having an upwardly extending first side edge spaced apart inwardly from said first side leg of said goal post framework, an upwardly extending second side edge spaced apart in the direction toward said second side leg of said goal post framework, said second side edge being also spaced apart inwardly from said second side leg of said goal post framework, said blocking member having an upper edge extending laterally, said relatively large lower portion of said blocking member extending downwardly from said upper edge to terminate along a laterally extending bottom edge which is adjacent to and substantially parallel to the ground between said first and second side edges of said relatively large lower portion of

said blocking member, said relatively smaller upper portion of said blocking member extending upwardly from said upper edge of said relatively larger lower portion of said blocking member extending upwardly from said upper edge of said relatively larger lower portion of said blocking member to terminate at an upper laterally extending edge of said relatively smaller upper portion of said blocking member which extends adjacent to and substantially parallel to said cross-bar of said goal post framework, said relatively smaller upper portion of said blocking member having a first upwardly extending side edge spaced apart inwardly from said first side leg of said goal post framework and located inwardly from said first side edge of said relatively larger lower portion of said blocking member, said relatively smaller upper portion of said blocking member also having a second upwardly extending side edge spaced apart inwardly from said second side leg of said goal post framework and located inwardly from said second side edge of said relatively larger lower portion of said blocking member, wherein said blocking member comprises a net, wherein said side edges of said relatively larger lower portion of said blocking member net are each spaced apart inwardly from their respective first and second side legs of said goal post framework a distance of substantially three feet, including a first doubled-back cord inwardly of and closely adjacent to said first side edge of said relatively larger lower portion of said blocking member net, said first doubled-back cord also extending laterally inwardly of and closely adjacent to a portion of said upper edge of said blocking member net, and a second doubled-back cord inwardly of and closely adjacent to said second side edge of said relatively larger lower portion of said blocking member net, said second doubled-back cord also extending

laterally inwardly of and closely adjacent to a portion of said upper edge of said blocking member net.

Respectfully submitted,

Ernest Kettelson Reg/ No. 20,421
Attorney for the Applicant
